Dear PCS

### **Reporting Luminaires with integrated LEDs**

It has come to our attention that there has been some confusion within Industry on which category non-household luminaires with integrated (non-removable) LEDs should be reported in.

We have sought clarification from BIS, and they have confirmed that non-household luminaires with integrated (non-removable) LEDs should be reported in category 5. The reasoning being that the LEDs become a component part of a finished product, and that this is consistent with the EU FAQs.

This decision supersedes the previous BIS Government guidance notes dated March 2014.
